

LU 13: Introduction to Social Impact Assessment

Module 4

Partner: University of Rome Tor Vergata

Work-based Learning (12 hours)

Project Work

Let's try to set up a social value assessment!

Keep in mind that: *Evaluation is understood as the process of determining the value and importance of the possible effects of an activity, policy or program. It is the formulation of a judgement, as systematically and objectively as possible, on a planned, ongoing or completed development intervention.*

STEPS:

Your Enterprise works in the field of youth and refugees training on digital skills. In particular, this year the enterprise runs a coding course.

1. Please design the impact value chain of this project and define:
 - The input value
 - The outputs
 - The outcome
 - The impact
2. Please list at least 3 outcome areas, one impact, and 3 outputs.
3. After having identified the impact, how do you set-up the impact life cycle of your project?
